

Wireless Endoscopy

Wireless technology at its very best

CelticSMR Ltd have introduced a range of High Definition (HD) wireless endoscopes for equine practice. Precision built in Germany to the highest standard, these endoscopes provide outstanding image quality with no cables, no light source, no fuss - just outstanding images everytime. With fast set up times and quick disinfection procedure these wireless endoscopes are ideal for ambulatory equine practice.

Features

Very high definition images every time with fast set up and no cables.

- Bronchoscope (135cm, 9.8mm: 165cm, 9.8mm) 2.8mm working channel
- Gastroscope (320cm, 12mm, 3.2mm working channel)
- Laryngoscope (for video exercise) – mounted on the bridle

No Cables

Wireless and HD camera technology provide very high definition images each time, every time. Minimal set up times, no cables, no light source, no fuss and no fibre optic cables so greater durability.

Benefits for ambulatory vets

- High Definition technology
- No cables
- No light source
- Fast set up time
- Quicker to sterilize
- No fibre optics to damage
- Just high definition images – *first time, every time*

Technical Specification

All endoscopes are:

- Wireless – so there are no cables or bulky light source and image is sent to a range of monitors up to 10m away
- HD – high definition for very high resolution images (580-750 px)
- Lithium ion battery – 3 hour battery life
- Monitors – a range of monitors from 5" wrist monitor to laptop or large screens
- Accessories – all endoscopy accessories available
- Disinfection – easy and quicker than conventional endoscopes as can be fully immersed for thorough disinfection

If you are interested in upgrading your equine endoscopy system to the latest wireless technology please call CelticSMR Ltd 0800 279 9050 to arrange a demonstration.
