

Hawick Veterinary Practice
1 Earl Street
HAWICK
TD9 9PZ

Purchased the AGFA CR in March 2010

From Sarah Simpson (partner):

" The ease of taking and reading digital xrays means radiographs are taken much more readily so the machine pays for itself. The quality of radiograph means it is much easier to make a diagnosis and treat accordingly. I would never go back to the old system."

From Vanessa Wilson (VN):

" Previously we used to use a manual wet developing process. It was very tedious and time consuming!! Our digital viewer has made our jobs so much easier! We used to have to wait ten minutes to develop an x-ray, then after finding out the wrong exposure had been used, it could take up to 1 hour for simple radiographs! Not to mention changing the hazardous chemicals!

Our new viewer has decreased the time in which we develop x-rays dramatically. In less than a minute we have a beautiful x-ray in front of us. If it has been the wrong exposure, then contrast can be altered without increased exposure to the animal. Anaesthetic times have also been halved. We regularly had to send our manual x-rays to referral specialists. This could take days to arrive at their destination via post. Now we can upload the radiograph onto a memory stick with ease! This is then transferred onto an e-mail in seconds and sent to the specialist. This has enabled us to have feedback very quickly. We are so proud when showing our x-rays to colleagues and clients.

The developer is so easy to use. This machine = happy vets and nurses, animals and clients. We really couldn't say a bad word about it!

WE LOVE IT!!!"
